## **Nathan Moody, specialist in electromagnetic radiation, honored**

LOS ALAMOS, NEW MEXICO, August 22, 2012—Nathan Moody of Los Alamos National Laboratory is among 78 of the nation's brightest young engineers selected for the National Academy of Engineering's (NAE) 18th annual U.S. Frontiers of Engineering symposium.

Engineers between 30 to 45 who are performing exceptional engineering research and technical work in a variety of disciplines attend the 2-1/2 day event, the academy announced. The participants -- from industry, academia, and government -- were nominated by fellow engineers or organizations and chosen from approximately 300 applicants. "Our nation's health, quality of life and security will depend on the engineering achievements of the 21st century," said NAE President Charles M. Vest. "The Frontiers of Engineering program gives young engineering pioneers the opportunity to collaborate and share approaches across fields. We believe those interactions will generate new ideas for improving the future." Moody's work centers on novel sources of electromagnetic radiation, including new electron sources and accelerating structures for high average current electron beams in a free-electron laser. His academic degrees are all in electrical engineering (doctorate, 2006; master's, 2004; bachelor's, 2000) from the University of Maryland, College Park. He joined Los Alamos National Laboratory in the fall of 2006. The symposium is to be held Sept. 13 to 15 at the General Motors Technical Center in Warren, Mich.. Topics examined include vehicle electrification, climate engineering and engineering materials for the biological interface. Alan I. Taub, retired vice president of global research and development at General Motors, is the featured speaker.
